

Mathematics for New Technologies in Finance

Exercise sheet 8

Through this exercise sheet, we let $E = \mathbb{R}^d$, J an interval on \mathbb{R} , and denote $\mathbf{Sig}_J: \mathcal{C}_0^1(J, E) \rightarrow \mathbf{T}(E)$ the signature map such that for all $X \in \mathcal{C}_0^1(J, E)$.

Exercise 8.1 (Signatures and reservoirs computing)

(a) Let $X \in \mathcal{C}_0^1([0, T], \mathbb{R}^n)$ satisfying the dynamic:

$$dX_t = \sum_{k=1}^m V_k(X_t) dW_t^k, \quad X_t \in \mathbb{R}^n, W_t \in \mathbb{R}^m, V^k: \mathbb{R}^n \rightarrow \mathbb{R}^n, \quad (1)$$

where $(W_t)_{t=0}^\infty$ is a Brownian motion. Prove that

$$X_t = \sum_{d=0}^{\infty} \sum_{i_1, \dots, i_d=1}^n \left(\int_{0 \leq t_1 \leq \dots \leq t_d \leq t} dW_{t_1}^{i_1} \dots dW_{t_d}^{i_d} \right) V^{i_d} \dots V^{i_1}(X_0) \cdot X_0. \quad (2)$$

where

$$Vf(x) = df(x) \cdot V(x).$$

(b) Rewrite (2) with signature in the form of the following:

$$X_t = \langle \mathbf{R}, \mathbf{Sig}_{[0,t]}(W) \rangle X_0, \quad (3)$$

and express the readout \mathbf{R} with $(V^k)_{k=1}^m$ (notice that \mathbf{R} depends on X_0).

(c) Relate (3) with reservoirs computing.

Exercise 8.2 In Exercise 8.1, denote the dimension of state space by N and the number of Brownian motion by d

- (a) Choose a dimension N and some random matrices A_1, \dots, A_d , then consider the Taylor expansion. Look at the solution of this system and describe their relation to signature. Can we express all signature components from this system?
- (b) Choose a dimension N and some random NN vector fields of type $\sigma(A_1 \cdot + b_1), \dots, \sigma(A_d \cdot + b_d)$. Consider a learning task $u \mapsto \sup(u(\cdot))$ and solve the regression problem on path space (Lipschitz functions) by a regression.
